

**WHAT IS CLAIMED IS:**

1. An ink composition used for inkjet recording, comprising a colorant, a humectant,  
water, and a water-soluble substance that is condensation-polymerized in the absence of  
5 the water,

wherein the water-soluble substance has a hydrophobic group.

2. The ink composition of claim 1, wherein the water-soluble substance is a hydrolyzate of  
an amino silane compound and a silicon compound having a hydrophobic group.

10

3. The ink composition of claim 1, wherein the hydrophobic group is an alkyl group.

4. The ink composition of claim 3, wherein the carbon number of the alkyl group is equal  
to or greater than 3 and equal to or smaller than 6.

15

5. The ink composition of claim 1, wherein the hydrophobic group is a fluoroalkyl group.

6. The ink composition of claim 1, wherein the hydrophobic group includes both an alkyl  
group and a fluoroalkyl group.

20

7. The ink composition of claim 6, wherein the carbon number of the alkyl group is equal  
to or greater than 3 and equal to or smaller than 6.

25

8. The ink composition of claim 1, further comprising a penetrant.

9. The ink composition of claim 2, wherein the amount of the silicon compound having a hydrophobic group is equal to or higher than 3mol% and equal to or lower than 17mol% when calculated on the basis of a silicon atom as a reference.
- 5 10. An ink cartridge comprising an ink composition for inkjet recording, wherein:  
the ink composition contains a colorant, a humectant, water, and a water-soluble substance that is condensation-polymerized in the absence of the water; and  
the water-soluble substance has a hydrophobic group.
- 10 11. The ink cartridge of claim 10, wherein the ink composition further contains a penetrant.
12. A recording apparatus comprising an ink composition for inkjet recording, the recording apparatus ejecting the ink composition toward a recording medium, wherein:  
15 the ink composition contains a colorant, a humectant, water, and a water-soluble substance that is condensation-polymerized in the absence of the water; and  
the water-soluble substance has a hydrophobic group.
13. The recording apparatus of claim 12, wherein the ink composition further contains a  
20 penetrant.
